LOOKAHEAD

Job Application for Python Engineer

Dear Recruitment Team,

About Me

I am a Machine Learning Engineer with a Master's degree in Information Technology from the University of Melbourne and a deep interest in computer vision for real-world applications. I've worked across drone vision projects, road safety detection, and environmental object tracking. I'm someone who values clear goals, careful planning, and follows through on commitments—I like to keep communication straightforward and results-focused.

Why This Role?

I'm drawn to this position because it combines technical Python development with the challenge of solving integration puzzles. Having worked with various ML APIs and third-party services in my computer vision projects, I understand the frustration of inconsistent documentation and the satisfaction of building robust solutions that work despite these challenges. The hybrid nature of this role—balancing technical implementation with stakeholder communication—aligns perfectly with my experience collaborating across teams to deliver practical solutions.

Why Me?

At KJR, I worked extensively with Python building ML pipelines and integrating various systems for Feral AI, a drone-based object detection platform. This involved connecting multiple APIs, handling inconsistent data formats from different sources, and building reliable interfaces that worked despite varying quality of third-party documentation. Previously, as an ML engineering intern, I developed Python applications that processed road imagery data, requiring integration with multiple data sources and APIs. I'm experienced with Python frameworks, API development, data processing pipelines, and have a track record of making complex integrations work reliably. My combination of strong Python skills, experience with third-party integrations, and ability to communicate technical constraints to stakeholders makes me well-suited for this role.

Sincerely,

Taylor Tang
