TECHNOLOGYONE

Application for Graduate Software Developer Program

Dear Graduate Recruitment Team,

About Me

I am a recent Software Engineering graduate (December 2023) currently working as a Junior Software Developer at KJR. With over a year of experience building enterprise web applications for government clients, plus internship experience in production systems, I have developed solid expertise in React/TypeScript, Python/Node.js, and cloud infrastructure. I am passionate about creating technology solutions that drive meaningful impact for communities and businesses.

Why TechnologyOne?

I am seeking to transition from my current consulting-focused role to a development-centric career in enterprise software, and TechnologyOne's Graduate Program represents the perfect opportunity. Having delivered applications for nationally-funded government initiatives and multi-state platforms, I am excited to contribute to market-leading ERP solutions that transform how organizations operate globally. Your company's commitment to innovation, community impact through the TechOne Foundation, and structured career development aligns perfectly with my aspirations to grow from junior developer to enterprise software expert.

Why Me?

I bring a unique combination of strong academic achievement, proven industry experience, and genuine passion for technological excellence. I have successfully delivered production-grade applications for high-stakes government initiatives, including Australia's Age Assurance Technology Trial and wildlife management platforms serving thousands of users. My experience with enterprise-grade security, API integrations, and scalable solutions demonstrates my readiness for TechnologyOne's complex ERP challenges. My customer-centric approach, collaborative nature, and commitment to continuous learning make me an ideal fit for your R&D team and graduate program culture.

Sincerely,

Taylor Tang
