Job Application for [Position Title]

Dear Recruitment Team,

About Me

I am a Machine Learning Engineer with a Master's degree in Information Technology from the University of Melbourne and a deep interest in computer vision for real-world applications. I've worked across drone vision projects, road safety detection, and environmental object tracking. I'm someone who values clear goals, careful planning, and follows through on commitments—I like to keep communication straightforward and results-focused.

Why [Company Name]?

[Customize this section for the specific company and role you're applying to. Research the company's mission, values, and recent projects. Explain why you're interested in this particular opportunity and how it aligns with your career goals.]

Why Me?

Most recently at KJR, I contributed to Feral AI, a system that uses drone imagery to detect objects in the environment. Prior to that, I worked as an ML engineering intern where I developed models to identify potholes and cracks from road images. I am experienced with PyTorch, OpenCV, and custom pipelines for image dataset preparation and defect detection. I've deployed models in real-world systems, handled noisy drone footage, and iteratively improved detection performance through data analysis and model tuning. I'm confident my skills in computer vision, paired with a practical, hands-on mindset, would make me a strong contributor to your team from day one.

Sincerely,

Taylor Tang
